# Problem Statement

- Writing a research paper takes in a lot of efforts. But according to a study in 2007 half the academic papers are read only by their authors and journal editors.
- One reason for this is the research papers being so lengthy that the general public never read it.
- Getting the real context of such research papers is often tedious and time consuming.
- Which is why we are making a Research Paper Summarizer WebApp.

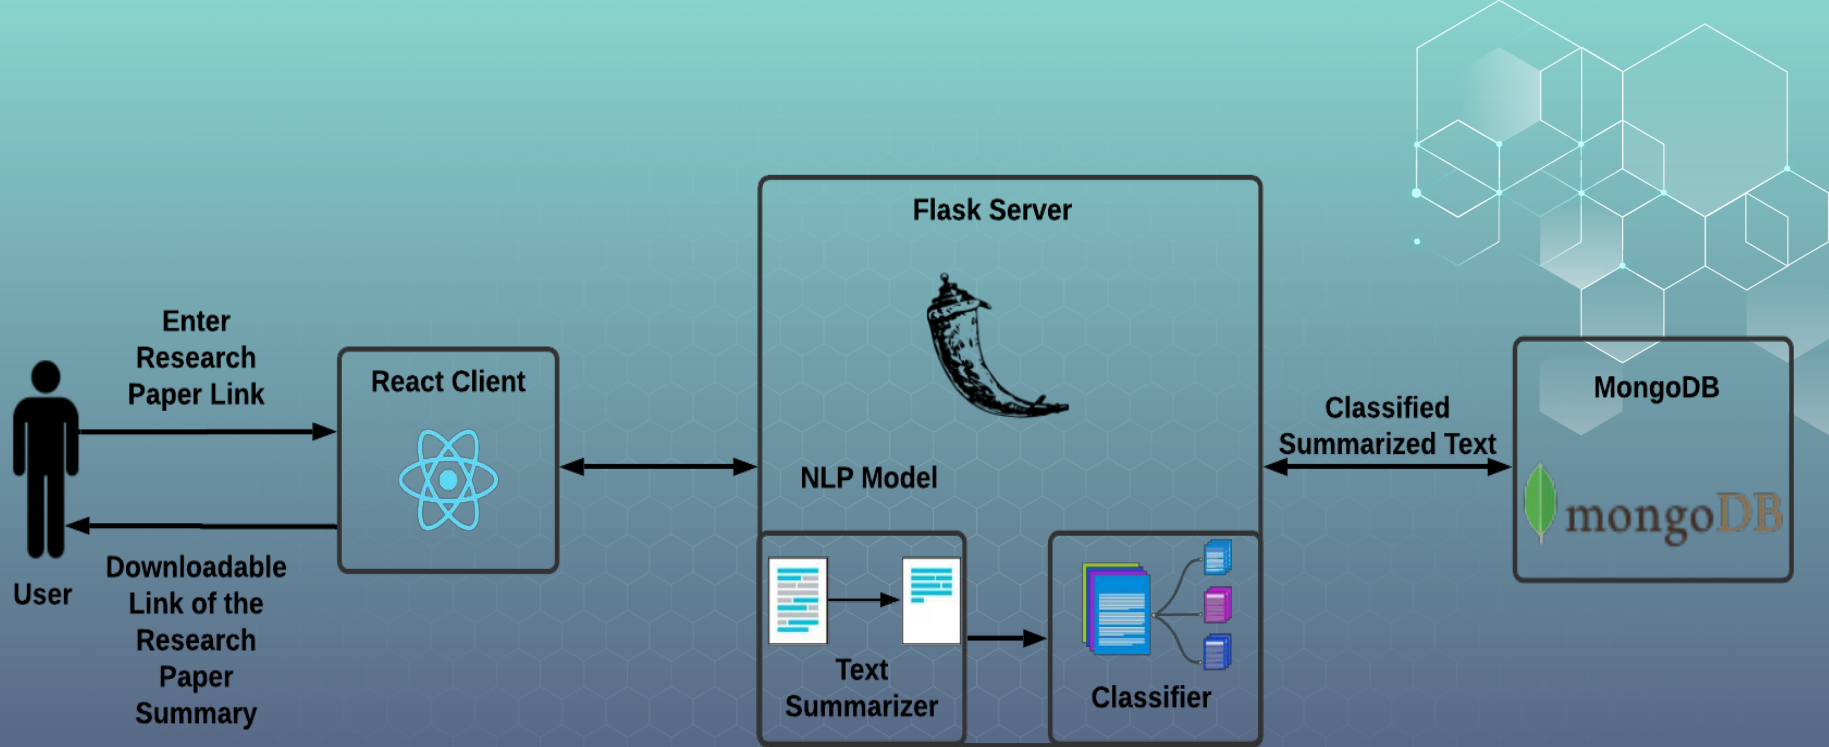

# OUR SOLUTION

- You no longer have to go through 20 pages just to realize, this is not what you wanted!
- We are making a time saving, user friendly WebApp to make your learning process easier..
- All you have to do is paste the link of the research paper you want to check out, and you'll be served with it's very precise summary.
